Step 1: Find your pressure washer PSI rating on the table above.

Step 2: Find your GPM in the column of your PSI.

Step 3: Find color and this will show what nozzles you should use.

Medium Gray.....Should purchase three 1/4" quick connect nozzles size #2.0 with a 40 degree angle

Dark GrayShould purchase three 1/4" quick connect nozzles size #2.5 with a 40 degree angle

Nozzles can be purchased at most Pressure Wash dealers or aftermarket dealers

Manufactured for TRIKLEENER® by General Pump 1174 Northland Drive • Mendota Heights, MN 55120

PARTS LIST

- Recommended for units with pressures of 2500 to 4500 PSI
- Quick connect to pressure washer wand
- 3 quick-connect, quick-change nozzles
- Easy nozzle storage for quick adjustments
- Upright operation saves back strain and fatigue
- Consistent and even cleaning path
- Cleaned area is easy to see and review
- Disconnects in a snap for easy storage
- 5 to 6 times faster saving energy and water
- COMMERCIAL GRADE FIELD TESTED FOR 3 YEARS

Revision D 072013

OPERATOR'S MANUAL

WARNING: Using a pressure washer involves water under intense pressure. Never point the water stream towards anyone and do not get any body parts near stream as it could cause serious injury

IMPORTANT NOTICE - PRIOR TO INITIAL USE:

Due to the possibility of small amounts of residue remaining after the manufacturing process, it is important to follow these instructions:

Before Inserting Nozzles:

Flush nozzles thoroughly with water.

Attach the TRIKLEENER® to the pressure washer wand by engaging the "quick connect" fitting and run washer at medium pressure for approx. 10-15 seconds to "Flush" the manifold.

Warning: Once unit is engaged, NEVER put any body part near water stream under any circumstances!

1. CONNECTING THE SPRAY NOZZLES TO THE MANIFOLD

Before installing the nozzles, it is very important to flush the Trikleener with clean water.

Slide the outer portion of the quick connect fitting (collar) up, insert male portion of spray nozzle and release to "lock in" the nozzle. Make certain that the nozzles are aligned to ensure correct spraying patterns.

2. CONNECTING TO PRESSURE WASHER WAND

Utilizing the quick connect fitting on the hand wand of the unit, connect directly onto the top of the TRIKLEENER male fitting.

3. SETTING THE HEIGHT ADJUSTERS

Pushing the metal tab, release the bar so that settings are possible. The lower the setting, the closer the unit will be to the ground, increasing the velocity of water and increasing the cleaning power. By raising, it decreases the velocity thereby creating a "gentler" stream for painted surfaces.

4. UTILIZING THE TRIKLEENER TO ITS MAXIMUM CLEANING POWER

The unit is designed to be best used at approximately a 45 degree angle to push the dirt and grime away from the user. There are two methods found effective. The first is using the unit in a "vacuum cleaning" motion, and the other is to roll the unit in a straight line in a slow and deliberate manner. Each method has been found to be effective.

There are times when the area to be cleaned is especially tough and may require even more water pressure and volume in order to clean in an effective and efficient manner. In these cases, reduce the number of spray nozzles to 2, replacing one with a plug. Make certain that the nozzles are located next to each other and aligned correctly.

6. UTILIZING CLEANING FLUID

Should the user desire to spread cleaning fluid, simply insert the proper nozzle that came with your pressure washer in the middle fitting and insert plugs on each side as shown. You should raise the unit to its highest level and you may want to "throttle back" on your unit. After spreading the cleaning fluid, replace the nozzles with those shipped with the TRIKLEENER and continue cleaning.

7. MISCELLANEOUS USES

Cleaning street curbs, decks, docks, painted porches or even 90 degree curbs can be cleaned utilizing the TRIKLEENER. Simply adjust settings as desired.

8. MAINTENANCE

After **EACH USE**, nozzles need to be removed and the guick-connect fittings and nozzles must be flushed with a hose to continue functioning properly.

Remove nozzles after each use to prevent them from sticking in the guick disconnects.

OTHER SAFETY PRECAUTIONS

- 1. ALWAYS have unit turned off when adjusting, inserting or removing nozzles or plugs.
- 2. **NEVER** attemp to adjust nozzle spray patterns when unit is engaged.
- 3. After completing the cleaning job, and pressure washer unit is turned off, pull trigger in your hand wand in order to release pressure **BEFORE** disconnecting the TRIKLEENER®.
