The Comfort of Home The Confidence of Champion

PROVIDING SAFETY AND SECURITY
FOR YOU AND YOUR FAMILY

8.5 kW – 22 kW

The Simple Solution™

The Comfort of Home

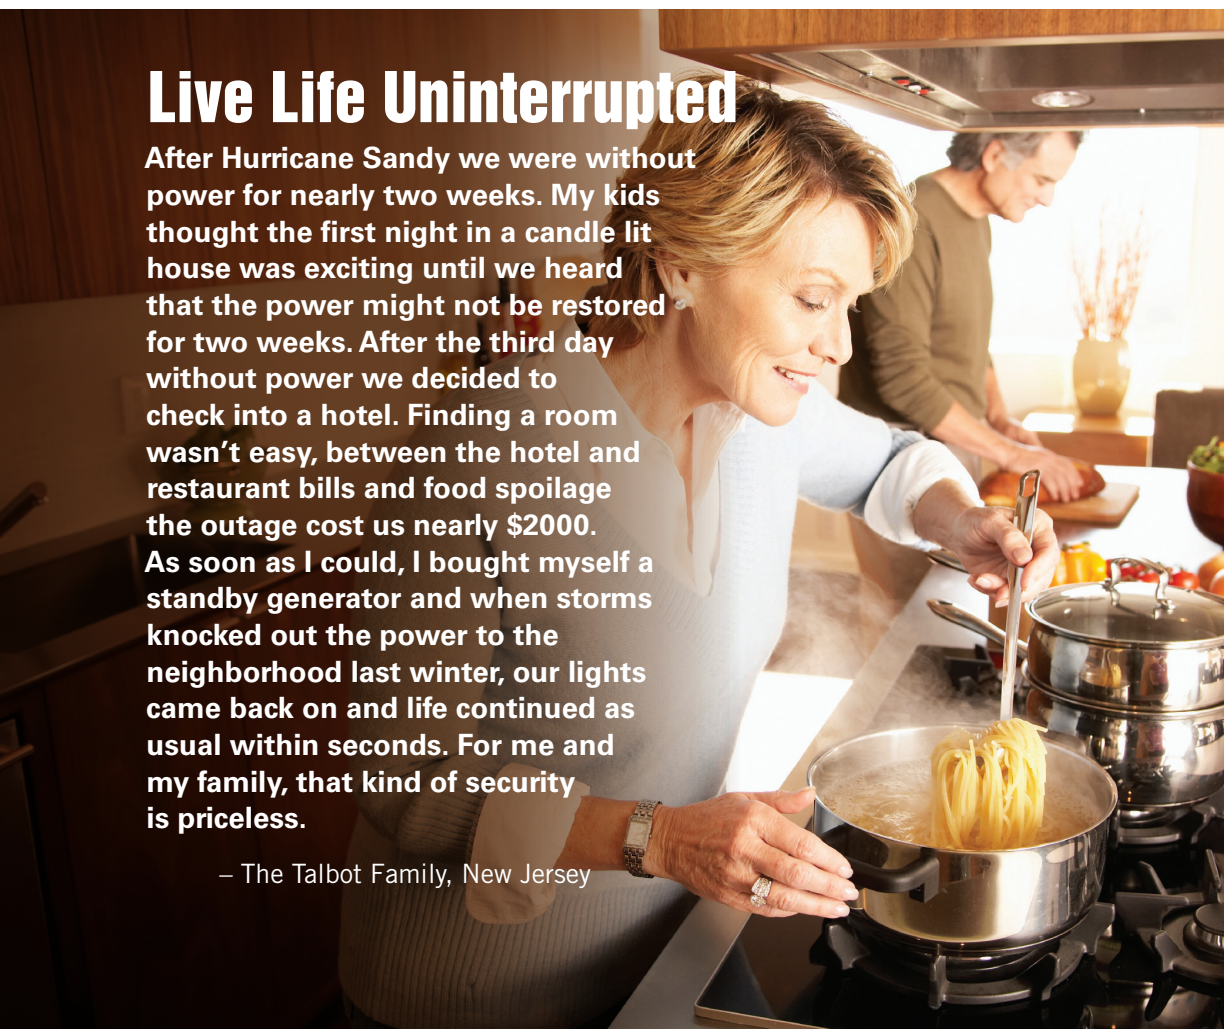

Security, convenience, health and safety. These are the comforts home owners hold dear. Power outages put all these comforts at risk. Annually millions of people suffer the effects of a power outage. Some are without electricity for days and weeks at a time. As we experience increasing numbers of power outages due to disruptive weather events and we place increasing demands on an overtaxed and aging power grid we can expect that the number of power outages will continue to rise – our security, convenience, health and safety will be put at risk.

As anyone who has lived through an extended power outage knows, the romance of candlelight fades quickly as the financial and emotional costs of keeping your home and family safe and secure rise.

Live Life Uninterrupted

After Hurricane Sandy we were without power for nearly two weeks. My kids thought the first night in a candle lit house was exciting until we heard that the power might not be restored for two weeks. After the third day without power we decided to check into a hotel. Finding a room wasn't easy, between the hotel and restaurant bills and food spoilage the outage cost us nearly \$2000. As soon as I could, I bought myself a standby generator and when storms knocked out the power to the neighborhood last winter, our lights came back on and life continued as usual within seconds. For me and my family, that kind of security is priceless.

– The Talbot Family, New Jersey

Stay in Your Comfort Zone

Power interruptions are more than just an inconvenience. When you lose utility power it's not only the lights that go out. Critical hardwired systems like heating and air conditioning units shut down, food begins to spoil, security systems often fail to work, sump pumps cease functioning, computers, televisions and home business shut down. The comfort, safety and security we expect of our homes is disrupted with potentially devastating effects. A Champion Home Standby Generator offers a simple solution to all of these problems by allowing you to stay in your comfort zone.

Champion gives your home a permanent source of backup power. In the event of a power outage the generator automatically starts and delivers continuous electrical power to your home. Since it is connected to your LPG or natural gas system it never needs refueling. No matter how long your power is out your Champion Home Standby Generator is there to keep the lights on, the water hot, the fridge cold and the TV tuned in.

Your Champion home standby generator

- Keeps lights on
- Powers sump pump
- Runs heat and air conditioning
- Protects against frozen pipes
- Keeps security systems operating
- Gives you peace of mind while you're away
- Powers major appliances
- Keeps home business operating

In the last decade:

2005 Katrina – \$81 billion in damage, outages to 2.6 million people some lasting weeks

2005 Wilma – Power outages to 3.2 million customers in Florida alone

2008 Ike – \$25 billion in damages and outages to 7.5 million people in 4 states

2012 Sandy – \$68 billion in damages, 8.5 million without power over 24 states

2012 Derecho – Wind storm knocks out power to 4.2 million people in 8 states

Securing Your Comfort

How it works

When the utility power fails, your Champion Home Standby Generator will automatically provide backup power to your home. Here's how it works.

- Champion Home Standby Generators monitor the flow of utility electrical power to your home. In the event that utility power is interrupted, the generator will:
 - Disconnect the home from the utility
 - Start automatically
 - Provide electric power to your home
- Your Champion Home Standby Generator is connected to your home's LPG or natural gas line so it never needs refueling and will continue to provide power regardless of the duration of the power outage.
- When utility power is restored to your home, the generator will:
 - Automatically disconnect the home from generator power
 - Stop automatically
 - Reconnect the home to utility power

Champion home standby generators will automatically perform weekly self-diagnostic tests to assure that they are prepared to start and provide backup power the moment the utility fails.

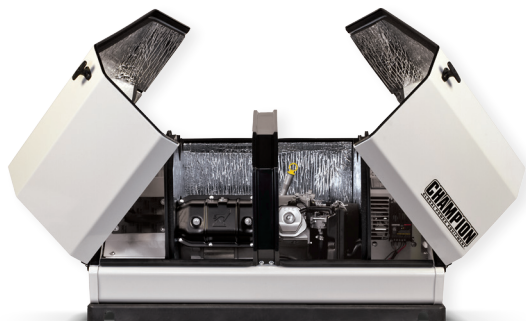

The Confidence of Champion

Champion Power Equipment is a market leader in power generation equipment. Champion has years of experience designing and manufacturing dependable and durable power products designed and engineered in the US to the exacting standards of the North American market. All our home standby products are designed in conformance with Environmental Protection Agency (EPA) requirements, California Air Resource Board (CARB) regulations and are approved by Intertek (ETL) in both the USA and Canada.

When the power goes out you'll want a Champion by your side.
